

## Big Year's Work Done Developing the Mines Of Beaver County

There has been a great deal of telling work done in the mines and prospects of Beaver county during the past twelve months, and it is doubtful if any other mining section of the state has made more substantial progress. The Cactus bonanza of the Newhouse Mines & Smelters corporation has been brought to such a state of development that it is now entitled to rank with the great copper mines of this country. In addition to that, it has been the means of creating more confidence in the future of that section than anything that has happened since the discovery of the old Horn Silver, which has been a constant producer and dividend-payer for twenty-five years or more.

### Good Work on the Indian Queen.

East of the Cactus, Uncle Jesse Knight, David Evans, Lorin Morrison and others have joined forces and now, under the corporate title of the Indian Queen Consolidated company, they have put in machinery, erected buildings and begun the driving of a long tunnel to develop the known ore resources of the Indian Queen property at great depth. This work is going on less than two miles east of Newhouse, and is relied upon to develop another great mine in the Beaver county mineral belt.

### Frisco Contact a Big Mine.

On the opposite side of the range, and adjoining the Horn Silver on the northeast, is the property of the Frisco Contact company, a magnificent block of ground that was quietly rounded up a few years ago by D. P. Rohlfing, the well known mining engineer who was for a long time in charge of operations at the Horn Silver. Since organizing his company on this property, which covers the extension of the Horn Silver vein, fine buildings have been erected, hoisting machinery, compressor plant, etc., have been installed and the large has been opened to a depth of 600 feet. It is known that good ore has been encountered, but Manager Rohlfing declines to discuss the matter, declaring that it is a nice thing to be able to say that there is work under the ground, but a great deal nicer, when justified, to be able to report that it is there in

quantity. Mr. Rohlfing is not much of a hand to talk, but there is no question but what he is making a mine of the Frisco Contact. He evidently intends to first develop the ore bodies and then tell his shareholders a story that will amount to something.

### Big Plans of the Majestic.

The Majestic company has done a great deal of work during the year and shipped a great deal of ore. With the slump in the price of copper the management put the lid on and has since been coming itself to the more extensive development of its several groups of fine claims. The company owns a big combination lead and copper smelter at Milford, and there is talk to the effect that some arrangement will be made during the next few months to have the plant trimmed up and placed in commission. It is certain that the ore of Beaver county and shipments that would come from Pioche and other places along the San Pedro would keep the plant going to its capacity of 100 tons a day without any trouble. Producers are determined, apparently, not to be held up by the smelter trust, and in that event, there is sure to be a great demand for smelter at Milford, and the Majestic plant in case it is started up.

### What Other Mines Are Doing.

The Burning Mosses, Beaver, Carbonate, Cedar, Tallman, Black Rock, Hecla, and a dozen or more other properties are now rounding into shape for the steady production of fine ore and, with the metals restored in price to something near what they are worth, the mines of the Beaver mineral zone will make more of a noise than they have ever done in the past. The mineralized zone in this county is not surpassed in extent, richness and variety of minerals by any district in this or any other state, and there is simply no way in the world to head off. Even the old Cave mine has at last been taken hold of by a crowd that will go at it and open it up as it ought to be, and that will mean the addition, or rather the reclamation, of another bonanza to the list of the splendidly growing list of money-making mines in that county.

### HOWARD P. SAUNDERS.

Howard P. Saunders, one of the best known mining engineers of Utah, is a striking example of the man who over-

comes tremendous obstacles and beats down all opposition in the accomplishment of a worthy object. He has been in the eyesight on the very threshold of active life, he yet kept his life's object clearly in mind, and never wavered from the path he laid out for himself as a boy.

Born in Milan, O., in 1865, Mr. Saunders is now in his 43rd year, the prime of life, with a fine business built up about him, and a wide usefulness and influence ahead of him.

Mr. Saunders was born on a farm, and in his youth went through the experience common to farmers' boys, doing all kinds of work, and in the direction of his father, in the spring, summer and fall, and attending the district school in the winter. After graduating from the district school the ambition for a higher education took hold of him; he had a clearly defined idea of what he wished to make of himself, and with the aid of his parents he attended for three years the famous university of Columbus, O. He had not yet completed his university course when an accident deprived him of the use of his eyesight and he was forced to suspend his studies. A great misfortune is sometimes a blessing in disguise, because it brings out the true metal that is in the man. It proved to be the case in this instance. Although his eyesight was gone, Mr. Saunders still retained his ambition; his determination to make his mark in life, to rise superior to circumstances.

In 1887 he removed to western Kansas, and since then he has had an experience so varied that it in itself constitutes a liberal education. For three years he lived in Kansas, during which time he recovered his health, and, better still, his eyesight. In 1890 he moved to Pueblo, Colo., where he had the opportunity he had so long desired of fitting himself by actual experience for his life work. He secured a position with the Pueblo Smelting company, a position he held for five years, during which time he made rapid strides in the direction of his chosen profession, that of a mining engineer. He was a close student always and kept his main object always in plain view. From Pueblo Mr. Saunders went to Florence, Colo., where he went into business for himself during the rushing Cripple Creek days. From Florence he went to Denver after two years, and in Denver he established his headquarters and devoted all his time to his profession, establishing valuable connections in various parts of the western states. For two years of this time he was mill manager and designer for the Sterns-Rogers Manufacturing company.

Following this, in succession Mr. Saunders became engineer for the Mine & Smelting company of Denver, during which time he built mills in almost all the states of the west. Leaving Denver, he became chief engineer for the Old Dominion Copper company

at Globe, Ariz., one of the largest copper companies in the world. He returned to Denver later and was associated with Franz Cazin for a year, and then went to Nevada, where he built a mill and superintended a large property.

Mr. Saunders came to Salt Lake City in 1904, when he was retained as superintendent of construction for the American Smelting company plant at Murray. After a year and a half with this company he entered the employ of the United States Smelting company. In October of last year he opened an office for himself, room No. 219, Dowry block, and since that time he has established business relations with some of the largest companies operating in the west, being consulting engineer for a large number of big concerns. He designed the Tintic smelter, the Cocomo Gold Mining company's mill at Cherry Creek, the Corinth Copper company's smelter at Corinth, Vt., and altered and revised the smelter at Santa Fe Gold & Copper company at San Pedro, N. M. In addition to all this he is engineer for the Salt Lake Copper company at Teocoma, and consulting engineer for the Superior Mines company at Humboldt, Nev., and a member of the executive committee of that company. It goes without saying that Howard P. Saunders is a very busy man.

### STATELINE COUNTRY IS LOOKING UP

The country around Gold Springs, Iron county, is fast coming into notice for the large and productive veins found throughout the district and for several miles north and south of the operations of the Jennie Gold Mining company and Short & Elliott have been mentioned elsewhere in this issue, and while these operations have supported the country for the past two years and have attracted the attention of the public on account of the success following all their work, there are numerous other valuable propositions, and the coming year will witness an amount of activity in several directions.

Stateline will no doubt see considerable life. Late in the season there was some talk about the starting up of the Johnnie mine, which has been idle for some time, but nothing was done. There is still a probability of its resuming operations, and if it does, the work planned should surely make it more productive than during the last run. The Ophir is being operated under a lease, and high-grade silver ore is being shipped. The leasers seem to believe that the property is a big one and hope to put it in shape for active development. The Big Fourteen shipped several lots of high-grade during the year, but has shut down for the winter. The Willowvale made a rich strike recently, and active development is promised for the coming year under a new company to be organized on the spot.

### Much Work at Deer Lodge.

Over the hill from Stateline, at Deer Lodge, Beck and Brown have done considerable work on their group lying between the camp and George Moody. Milton Dammron has prosecuted work for some time on the Iris, and the Deer Lodge Consolidated company has been working steadily pushing its long tunnel in to catch the mammoth ledge. When this is done, this property will be in shape for a mill and will reward its stockholders for their persistency and patience.

Fay has been practically dead and outside of some work done on the Rafferty property, can report no progress. The Buck Mountain company and the Snowflake Annex company at Gold Springs are both hard at work on developments, with considerable promise of first-class results. Both are favorably located and should be heard from favorably in the near future.

The Wild Irish is one of the big properties of the camp, and with its development will make a winner. Its ore deposits are large and carry the necessary values to assure success. The property is well located and has an abundance of water.

The Drake, McMullen, Ceresus, Wellington and the Utah-Stateline groups are all among the promising properties, and the latter, especially, has been worked successfully during the past year.

### THE SCRANTON MINING CO.

The Scranton Mining company presents a good illustration of what perseverance and good management will do in the development of a property. When great obstacles are to be overcome, when grave problems of financing, transportation and development are to be solved.

The property of the Scranton Mining company is located five miles east of Del Monte station, on the Salt Lake route. It includes a group of about twenty patented mining claims and several unpatented claims. The patented ground of the company covers fully 6,000 feet of the main mineral-bearing zone of the district.

The Scranton has been worked systematically for seven years. The workings include three miles of tunnels, drifts and other workings. The mine is equipped with engine, compressor, air drills, air hoist and substantial buildings for bunkhouse, boarding house, assay office, carpenter shop, blacksmith shop, barn and ore bins.

The output of the Scranton consists of lead and zinc ores. Since the first of January last the output has averaged 1,000 tons of zinc ore and 200 tons of lead ore. The zinc ore has been shipped to the Kansas gas belt; the lead ore has been treated by the Utah smelters. Of course, the recent slump affected the Scranton as it did all the mines in the west, especially those producing ores of lower grade.

While the Scranton produces both zinc and lead ores, the two are separate and distinct in the mine. The lead ore contains very little, if any, zinc, and the zinc ore is entirely free from lead. This greatly simplifies the work of extraction. The chief characteristic of the mine, the one that gives the owners absolute confidence in its future, is the tremendous extent of the ore deposits. As yet, even with all the work that has been done, the surface has been merely scratched; the ore body has been hardly exposed. And

### THE DALY-WEST.

Several Utah mining camps have apparently had their full measure of misfortune the past year, and of these Park City has probably had her share.

With the work of clearing out the Ontario tunnel delayed, and with strikes at the Daly-West, Ontario and Daly mines, the parkies have experienced a hard year. Yet as 1908 dawns the prospects for Park City are brightening up and from present indications a new era is dawning for the camp.

Of the properties most affected during the past few months by the labor troubles and other disturbances, the Daly-West has had its share and has stood the buffeting better than any other property in the Summit county camp. The delay experienced in restoring the famous Ontario drain tunnel to its former usefulness has served as the most serious handicap to operations at the Daly-West during the year. But from information which comes from an apparently reliable source there is every reason to believe that the last step in the costly campaign to reopen the big waterway will shortly be taken. When the last obstruction is removed from the drain, the stoppage of which has flooded all the lower levels of the mines, it will be an important step toward the reopening of the mine for the employment of more men and a larger output.

Outside the Ontario and Daly properties, joint owners of the tunnel, the Daly-West property suffered most from the disaster. The management of the mine had planned to carry out a system of deep mining, and this, of course, has been prevented by the labor trouble. The mine had made a contract with the Ontario people, in consideration for a big rental, and the tunnel was to have been pushed forward to the Daly-West side. This work had been practically completed and the Daly-West management was prepared to begin work where the Ontario people had left off, when the cave-in occurred. The plans outlined for the work on the lower levels of the Daly-West of course were abandoned immediately. With the tunnel once more opened it is expected the original plans will be carried out in so far as possible.

### Probable Consolidation.

It was about the time of the cave-in that the consolidation between the Ontario, Daly and Daly-West was effected. The consolidation amounting only to a working agreement at first, the miners became convinced that the mines could be operated under one management much more economically than by three different managements and consequently overtures were made to J. B. Haggin and representatives of the Hearst estate, which interests had remained intact since the organization of the Ontario and Daly properties.

The Wild Irish is one of the big properties of the camp, and with its development will make a winner. Its ore deposits are large and carry the necessary values to assure success. The property is well located and has an abundance of water.
